

THE BUILDING TODAY

The chamfered corner

Broadway at East 17th — the recessed entrance, the arcaded balustrade above the storefronts, the cornice on its modillions.

Under the red awnings

The corner through its long pet-store tenancy, the ground floor given over to canvas.

The Broadway elevation

Buff brick above a painted stone base, belt courses dividing the front into its three parts.

Looking up

Six storeys of Lienau's frame as remodelled in 1925 — the yellow-brick version the critics lamented.

Between tenants

The ground floor standing empty, the entrance bay under its glass canopy.

860 Broadway

From Sapokanican to Silkscreens: The Many Lives of a Union Square Corner

AUDIO — 860 BROADWAY | BRICK CAKE 17 min 00 s

Audio track — playable in the HTML version of this document.

THE LAND BEFORE THE BUILDING

Long before any structure rose on this corner, the land belonged to the great colonial estates of Manhattan. This was a district shaped by the farms of old New York, where (Other farms as far as Twenty-third Street on the west side belonged to Thomas Burling, John Cowman, Isaac Clason, Sir Peter Warren, Isaac Varian, and Christian Milderberger. On the east side, were the two farms of Cornelius Williams and John Watts. At the corner of the present Seventeenth Street and the Bloomingdale Road was a square acre of ground belonging to the Manhattan Bank, acquired so it is supposed, as a sort of refuge for conducting business in case of being driven from the city by the yellow fever.)

Among these estates was one of singular importance. *(The Warren farm is one of the most interesting estates on Manhattan Island. It includes the Indian village of Sapokanican; the Dutch village of Northwyck, and the English settlement of Greenwich, which did not include all of the "Greenwich village" of modern New York.)*

The east side of Broadway in this stretch was dominated by grand landholdings: *(On the east side of Broadway, from Fourteenth Street to Nineteenth Street, and covering some eight or ten blocks, including part of Union Square, was the estate of Tiebout Williams, next adjoining which was the Krom-Messie property, running back to near the Second Avenue, in about the centre of which Grammercy is now situated. Adjoining this estate and extending around the Post Road was the property of John Watts, a leading citizen of New York.)*

The curious square acre at the corner belonged to a bank whose presence puzzled even contemporaries. *(A large building on the East side of Broadway, between Seventeenth and Eighteenth streets, was known as the Manhattan Bank¹, and so designated in a map of a later day; but why so termed I have forgotten. The weather at this time was so intensely cold that the head and all harbors of Long Island Sound were closed by ice.)* This branch was a genuinely early structure — *(Bank of the Manhattan Company (branch). 846-2 Site: E. side Broadway, bet. 17th and 18th Sts. Erected shortly after 1806)* — and it did not survive the mid-century, being *(Demolished bet. 1847 and 1849.)*

In these earliest years, the address itself held nothing at all: in the 1815 record, *(on 860 Broadway, there is reference to 0 structures.)*

THE HOTEL ERA

By mid-century the district had blossomed into a fashionable quarter of grand hotels, and 860 Broadway became one of the earliest. *(In 1850 Union Place Hotel Occupied No. 860 Broadway.)*

The neighborhood's transformation was rapid and celebrated: *(Union Square had never been an exclusively residential location, like Fifth Avenue or Gramercy Park. In 1851 the Daily Tribune described Union Square as the favored location in the city for sumptuous family hotels. The Union Place Hotel, completed in 1850, stood at 860 Broadway, at the southeast corner of Fourteenth Street.)*

It stood among a distinguished company of establishments — *(The finest hotels dating from this building boom were the American Hotel at Broadway and Grand Street; the Union Place at 860 Broadway, at Fourteenth Street)* — and it would eventually take on a second identity, for there survives *(a history of the Union Place Hotel (known as the Morton House after 1868), at the south-east corner of Broadway and 14th St.)*

The maps of the period reflect this dense residential-commercial mix. In 1853, *(on 860 Broadway, there is reference to 3 structures; Brick or Stone dwellings first class (slate or metal roof & coped), Brick or Stone dwellings first class (slate or metal roof & coped), Brick or Stone Store first class.)* By 1867, the record simply notes *(3 structures; Building, Building, Building.)*

A stroll through the neighborhood in this era captured its restless glamour: *(The Everett occupies the opposite corner of the square, and now we are back into Broadway again at the corner of Seventeenth street. From this point to Thirty-fourth street, can be seen a succession of stores and hotels that tell at once the story of our grandeur and our folly, and which, when the reaction against fast living that many sensible people are looking for, comes, will loom up as monuments of faded splendor.)*

ELECTRICITY AND ANTIQUES

As the Gilded Age dawned, the address became a site of innovation. *(Electricity came to Broadway in 1880, when the Brush Electric Light Company opened offices at 860 Broadway, one block north of Union Square. Charles Francis Brush, thirty-one, who wore the era's requisite handlebar mustache and an optimistic, steadfast expression, was an engineer and inventor of enormous intelligence, with a Barnum-like flare for theatrical self-promotion. Among Brush's patents were a more efficient electrical generator and an improved electric-arc lamp.)*

The corner also became a home for fine furnishings and antiques. Under the heading of *(ANTIQUITIES)*, the directories listed *(Sypher & Co., 860 and 1351 Broadway)*, and in the shopping guides again *(Sypher & Co., 860 Broadway.)* The address also served the storage trade, listing under *(STORAGE)* the name *(Rogers, John, 860 Broadway.)* By 1885 the atlas confirmed the occupant, showing *(Sypher & Co. Antique Furniture' and 1 Structure; Brick building.)*

THE PARISH BUILDING RISES

Then came the structure that stands today. *(Was built in 1884.)*

Its full pedigree is rich: *(PARISH BUILDING, No. 860 (Also known as the Butler Building, Lienau Building, Thonet Brothers Depot. Andy Warhol's Factory). 1883-84, by Detlef Lienau; remodeled 1925, by F. H. Dewey & Company (6 stories), The vigorous original building was considerably watered down to its current yellow brick version Site of Henry Parish house (also known as the Union League Club).)*

The building's origins lay in commerce and family legacy: *(When business picked up in the 1880s, the Parish family's namesake building (1883-84), at 860 Broadway, on the northeast corner of Seventeenth Street, was one of the more interesting new designs, a late work of Detlef Lienau. The Parish Building was developed by descendants of Henry' Parish, the dry-goods merchant, whose Italianate brownstone mansion (R. G. Hatfield, 1847-48) previously occupied the site and was home to the Union.)*

Not everyone admired it. *(Although Madison Square and the east side of Union Square in the early 1880s were still unadorned by tall office and manufacturing buildings, the stretch of Ladies Mile along Broadway had changed. The Real Estate Record drew attention to the northeast corner of Seventeenth Street and Broadway (860 Broadway) where a building stood of such poor architectural composition that it gave the appearance of two buildings, one set on top of the other. As the building was conspicuously located, the Real Estate Record found its commonplace design by Detlef Lienau regrettable.)*

The successive layers of commercial occupancy defined the corner for decades, and a later view recorded that *(Many commercial successors to the Parish Mansion, including the new Union Place Hotel would continue to take over this corner until 1893 when lots were merged and the extant six story commercial structure designed by Detlef Lienau was erected.)*

Its physical character was catalogued in painstaking architectural detail — a *(Late-19th-century-Commercial)* style, built of *(Buff Brick, Stone, Terra Cotta)*, with a *(Chamfered, Recessed, Iron Surround)* entrance, *(Spiraled Iron Enframements)*, a *(Flemish Bond)* brickwork, and a roofline crowned by a *(Projecting Cornice, Modillions, Rosette Frieze, Dentils, Scalloped Parapet.)*

A CORNER OF COMMERCE

By 1897 the atlas showed the block filled with *(3 structures; 6 Story Brick building, 6 Story Brick building, 6 Story Brick building.)*

A vivid streetscape survives from the turn of the century, when the corner teemed with businesses: *(860 to 872 Broadway, Between 17th and 18th Streets. Thonet Bros., Bentwood Furniture-Peter M. Reilly, Cigars-New York Barber Co.-Conrad's Lunch Room-Morse Bros., Men's Wear-Paul L Bryant, Dyeing and Cleaning -Old Staten Island Dyeing And Cleaning Co. - Plymouth Raincoat Co.)*

Through the twentieth century the building took on new commercial tenants and identities. In 1916 it was recorded with the notation *(Lofts, Parish Bldg. Lofts)* and described as *(2 Structures; 6 Story Brick building with Store and Elevator and 1 Story Brick Extension.)* By 1930 the name over the door had changed, reading

('Butler Bros') with reference to (1 Structure; 6 Story Brick building with Store and Elevator,) and by 1955 it still bore ('Butler Bros.') as (1 Structure; 6 Story Brick or Stone or Concrete building with Store and Elevators and 1 Story Brick or Stone or Concrete Extension.)

ANDY WARHOL'S FACTORY

The building's most legendary chapter began in the 1970s. The listing is simple and iconic: (ANDY WARHOL STUDIO, 860 Broadway In 1974. Warhol moves to a nearby studio that came to be known as "the office." He stayed here until 1984.)

The move itself was pure Warhol: (By 1974, Warhol had run out of space at his Union Square studio called The Factory and, in August of that year, he moved across the street to this six-story brick building. The space was located on the third floor and included over 12,000 square feet of offices, storage space, and studios. Always economical, Warhol made it a condition that all visitors to The Factory during the move had to carry at least one item across the street to the new building.)

The space had a storied past of its own: (The third floor of this building, once the offices of S&H Green Stamps in the twenties, was the setting for Warhol's third Factory from 1974-1984. Here, Andy Warhol Enterprises, initially set up in 1957 for tax purposes, took off. The new Union Square space was just down the block from the former one and had a back elevator, an added level of security to prevent another Valerie Solanas-type incident from taking place.)

Its interiors reflected Warhol's new grandeur: (The new offices occupied the entire third floor of the building at 860 Broadway. Decades earlier, it had been home to S&H Green Stamps, whose products had been the subject of some of Warhol's earliest Pop Art. Their vintage offices came with a grand, wood-paneled boardroom, shipped over from England and perfectly suited to Warhol's newly conservative image. When Fremont and Hughes first saw the space, the boardroom was surrounded by yawning empty spaces interrupted only by slender cast-iron columns; they must once have been filled with typists and clerks.)

Here, one of Warhol's most enduring projects was born, (One of the first was accidental: Warhol's Time Capsules. Warhol took standard packing boxes left over from the move from 33 Union Square a block away, and began to fill them with hundreds of items coming into the office each month. Once Warhol had filled a box, it would be sealed, dated, and packed away; currently the Warhol Museum in Pittsburgh houses the 600+ boxes.)

The daily rhythms of the Factory were legendary. (In the mid-seventies, Factory lunches were procured from the gourmet Italian grocery store Balducci's, and usually picked up by Brigid Berlin, who became a Factory regular in the early sixties and a full-time Factory employee shortly after Warhol moved to 860 Broadway. A

typical order would consist of curried chicken salad, string bean salad, pasta salad, sliced tomatoes and broccoli in oil, and several loaves of bread.)

It was also the site of one of art history's most famous first meetings. (The first time that Warhol and Basquiat met, after their early encounters on the street, was for a lunch date at 860 Broadway arranged by Warhol's ambitious Swiss dealer Bruno Bischofberger.)

Production here was industrial in scale. (While 860 Broadway played host to the planning and designing of all the new series, as well as to any background painting that was called for, the silkscreening itself—whether onto painted canvas or printmaker's paper—was outsourced to a contractor named Rupert Jasen Smith, who had replaced Alexander Heinrici in the last years of the '70s.)

Eventually the enterprise outgrew the space. (At first, Warhol had resented Fred Hughes's insistence that they needed a bigger headquarters than they had at 860 Broadway, so there'd be room for Interview and the video projects to continue expanding.) In time he relented, and (on October 19, 1981, he laid out \$2 million, most of it borrowed, for the purchase and renovation of the ConEd building, as most seemed to call it. A few weeks later, he was raving about his new acquisition as "just sensational, so beautiful, you just can't believe it. . . The best thing is the roof terrace, it's like a terrace for a beautiful, glamorous apartment.")

The transition dragged on. (Warhol might have closed on the ConEd building in late '81, but it took until the spring of '83 for the big renovation to be close enough to completion for anyone to move in. The staff at Interview arrived first, and Warhol played his old trick of making them carry the contents of their desks to their new workplace sixteen blocks north. "My back was just killing me," Paige Powell recalled.) In the emptying rooms Warhol found a strange freedom, and (By the end of June 1984, the studio at 860 Broadway was left with Warhol and Brigid Berlin as its only occupants.) As one colleague recalled, ("He got to turn 860 Broadway into a big mess," Vincent Fremont recalled. "It became an artist's studio, in total.")

The scale of the operation being moved was staggering: (To get an idea of the scale of Warhol's enterprise, consider the transfer from 860 Broadway to the ConEd building, even after the Interview staff had already installed themselves there: A moving company estimated that it would take twenty men working to load four 40-foot trucks, over four Saturdays, to get everything transferred, at a cost of \$35,000.) In the end, this address stood as (the fourth Factory location for Warhol, who had previously occupied smaller space at 231 East Forty-Seventh Street, 33 Union Square West, and 860 Broadway, but the first to be given a full architectural treatment.)

LATER LIVES

After Warhol, the building continued to host new tenants and new stories. Among them was a bar remembered simply as *(Underground, located at)* *(The Underground: 860 Broadway at 17th Street)*.

In more recent decades the ground floor became a familiar retail fixture: *(PETCO 860 Broadway (at Union Square W). With a selection of over 10,000 items, including food, toys, treats, and petcare products, this store is a pet owner's treasure trove. There are sections for cats, dogs, birds, fish, and even reptiles!)*

The store even became a hub for animal rescue, home to volunteers who recalled: *(My wife and I volunteer for KittyKind, an organization providing care for the cats who are up for adoption at Petco. We clean their cages and play with them. They call it "socializing them." I call it fun.)*

farm, extending from the Bowery westward between the present Fourteenth and Sixteenth streets, to John Smith, from whose executors the farm passed in 1788 to Henry Spingler, a shop-keeper of New York, for nine hundred and fifty pounds. Spingler's farmhouse stood within the limits of Union Square. Other farms as far as Twenty-third Street on the west side belonged to Thomas Burling, John Cowman, Isaac Clason, Sir Peter Warren, Isaac Varian, and Christian Milderberger. On the east side, were the two farms of Cornelius Williams and John Watts. At the corner of the present Seventeenth Street and the Bloomingdale Road was a square acre of ground belonging to the Manhattan Bank, acquired so it is supposed, as a sort of refuge for conducting business in case of being driven from the city by the yellow fever. 850.1 81.1

The hotel known as the Spingler House stood for many years on the west side of the square on the site now occupied by the Spingler building; on the south side, near University Place, was a fashionable restaurant called the *Maison Dorée*; on the southeast corner of Broadway and Fourteenth Street is the Hotel Churchill, formerly the Morton House, and originally the Union Place Hotel, established in 1850. 846.2 565.2

The section surrounding Union Square for several blocks was for a great many years the ultra-fashionable part of the city. Among the prominent shops which occupied the west side of the square was the great jewelry house of Tiffany & Co., which moved here from Broadway and Broome Street in 1870, occupying a site upon which formerly had stood the Spingler Institute. Tiffany remained at the southwest corner of Fifteenth Street until 1905, when the business was moved to Fifth Avenue and Thirty-seventh Street, as the highest class of trade was moving to that avenue; Schirmer, and Ditson & 842

THE SIR PETER WARREN FARM

BLOCK CHECK LIST. 712-765-770-849-848-819-817-849-
543-636-638-712.

This farm comprises five distinct parcels of land.

A. The Allard Anthony grant or Greenwich House lot.

B. Tellis Mandeville's grant, with a portion of the land granted to A. C. van Schaick, by the corporation of the city of New York.

C. Cosyn Gerritsen's grant; Wouter van Twiller's house lot; a lot directly across the road from the house lot, and the remainder of A. C. van Schaick's grant from the city of New York.

D. The bouweries of Francis Leslie and Oloff Stevenson van Cortlandt, excepting the homestead of Mandeville, and the land of Van Couwenhoven.

E. The land granted to Sir Peter Warren by the corporation of the city of New York.

The Warren farm is one of the most interesting estates on Manhattan Island. It includes the Indian village of Sapokanican; the Dutch village of Northwyck, and the English settlement of Greenwich, which did not include all of the "Greenwich village" of modern New York.

The Ratzer Map of 1766-7 and the Bancker Map of 1773 show the varied topographical features of the farm. The bluff along the river, with a fine beach below. The turbulent brook (called by the Indians the "Mannette" or "Devil's Water," corrupted to the "Minnetta brook," a Dutch interpretation) which encircled it on the east and south, except for a short distance where "the old road along Jan van Rotterdam's to the strand" completed the southerly boundary.

The beautiful wood that Oliver De Lancey had been nursing for forty years (Chronology, April 11, 1776) was still standing.

There are four houses on the maps none of which had been built by Warren. These were Van Twiller's own home, which was "sett up" before Oct. 4, 1633; Van Ruyven's farm house (later the Teunis Eides house), built 1668; Greenwich House built in 1700; and the Henderson house, later called the Warren Mansion House, which had been built by James Henderson, about 1726-7.

The parcels composing the farm were acquired by Warren between June, 1731, and September, 1744. None of the deeds into him are of record. The originals are all in the archives of the N. Y. Hist. Soc.

Peter Warren was born in 1703, at Warrenstown, county Meath, Ireland. He entered the navy as a volunteer in the early part of 1717. He passed his examination, Dec. 5, 1721. May 28, 1727, he was promoted to be captain. In 1728, he commanded the "Solebay," frigate, on the station of the West Indies.

It was in 1728 that he came to New York. Edward Floyd De Lancey says: "Peace from 1729 lasted for several years, and Captain Warren was unemployed until the spring of 1735. During this period he resided in the city of New York, having married, in 1731, Susannah, eldest daughter of Etienne De Lancey, of that city, and his wife Anne, second daughter of Stephanus van Cortlandt and his wife Gertrude Schuyler." See Vol. III: 866.

December, 1735, Warren commanded the 20 gun frigate "Squirrel," for service on the coast of Carolina and North America, remaining on that station for six years. In January, 1742, he was appointed to the "Launceston," 40 guns; in 1744, to the "Superbe," 60 guns, with a broad pennant as admiral in command. This last appointment proved highly lucrative. Early in 1745 he took his little squadron north and cooperated with the colonial troops in the attack on Louisbourg. Warren took part in the capture of many French vessels bound for the West Indies. His prizes netted him great wealth. Aug. 8, of

that year, Warren was appointed rear-admiral of the blue and, in the spring of 1747, second in command of the western squadron under Anson, with whom he took part in defeating the French off Cape Finisterre, May 3, 1747. For his share in this victory he was rewarded with the Cross of the Bath and was made commander in chief of the western squadron. July 15, 1747, he was promoted to be vice-admiral but his health had begun to fail and he was obliged to retire from active service.

Before his success at Louisbourg, he had asked the Duke of Newcastle to procure for him the government of (New) Jersey when it became vacant, "the having which might be an introduction to that of New York, where I should be at the pinnacle of my ambition and happiness." (Warren to Anson, April 2, 1745.)

Warren did not return to America. He was a member of parliament from July 1, 1747, until his death, which occurred whilst he was on a visit to Ireland, July 29, 1752. A monument was erected to his memory in Westminster Abbey.

There are numerous entries in the Chronology about Sir Peter Warren which will more completely tell the story of his life in New York.

PARCEL A

THE GREENWICH HOUSE LOT

Capt. Warren's first purchase, at Greenwich, was the small farm overlooking the Hudson River north of the "Old Road to Grinedge."

The deed is dated June 18, 1731. This is the year in which Warren married Susannah De Lancey.

The house which Capt. Johannes Benson built, in 1700, for his own use, was a good one for the period. Ratzer shows that it was about 50 ft. wide, facing the river, and 60 ft. deep, with a long extension on the north side.

Warren occupied this house probably until he bought the Henderson farm, in 1744.

That he gave it the name of Greenwich House cannot be stated with authority, but it was so known in 1737. The first mention is in the deed from Cornelius Webber to Peter Warren, June 4, 1737. (See the Mandeville tract: B.)

For many years Col. Oliver De Lancey, Lady Warren's brother, occupied the house. He was still in Greenwich, May 16, 1774.—Letter in De Lancey Papers, 1647-1804, in N. Y. Hist. Soc.

The Bancker Map of 1773 (A Pl. 5, Vol. III) and the Ratzer Map of 1766-67 (Pl. 41, Vol. I) show the formal gardens and the orchard.

Dr. Hamilton described Greenwich House, June 22, 1744, as "a pretty box of a house, with an avenue fronting the river, belonging to Oliver Dulancie."—Chronology. Greenwich House and grounds (lots 17 to 21 inclusive on the Bancker Map of 1773) covered 22½ acres. In 1787 it was in possession of David Campbell.—De Peyster Deeds, Vol. II, in N. Y. Hist. Soc. The house seems to have been standing in July, 1791, when the Warren heirs conveyed the house and 22 acres of land to Peter Kemble and John Watts.—*Liber Deeds*, XXV: 71 (Albany).

"Ye Land designed for ye Neighbourhood," in 1662 (see the Burgomaster's bouwerie), "was desired by Mr. Allard Anthony, Sheriffe, & Company . . . for an Outdrift for their Cattle," in 1672. The community had to relinquish its commons. The little piece of common land became Greenwich House plot.

FRANCIS LOVELACE, Governour, etc., to ALLARD ANTHONY AND COMPANY. Patent and Confirmation dated March 13, 1672.—*Liber Patents*, III: 105 (Albany).

CONFIRMS "A parcel To'rds North River neare the Bowery heretofore called the Burgoe Mast^{rs} Bowery which said piece of land was likewise called by ye Indyan Name of Sappo-

HISTORY OF "BOTH SIDES OF BROADWAY."

565.1

Between Thirteenth and Fourteenth streets, all vacant.

The era of improvement had, however, commenced, and the street became speedily occupied by elegant residences.

It was about the time now spoken of that the migration of the wealthy classes of our population from the lower part of the city became most animated, and not only Broadway in the vicinity now spoken of, but all the neighboring streets received their influx of fashionable residents, and that section became the court end of the city, a position which it retained for some years.

The most conspicuous public building in that section was Grace Church, which was erected, in 1846, at the corner of Broadway and Tenth Street. The Rev. Thomas H. Taylor was the pastor.

Abingdon Road was the name of a pleasant cross road connecting Greenwich with the Great Post Road, which branched off eastward from the present Broadway near Madison Square. The Post Road, or Boston Road, as it was originally called, was the first highway laid out through the length of the island; and the Bloomingdale Road was a local thoroughfare leading to the hamlet of that name.

This road was widened in 1760, above Abingdon Road, to about Fortieth Street, to the width of four roads, in which condition it remained until the improvement of Broadway.

The topographical character of the island in this vicinity was of a broken and rocky character, diversified with swamps and a briery growth, with but slight attractions to the agriculturalist.

Hence but a small portion was taken up by settlers prior to the city charter of 1786, which granted the city corporation all the waste, vacant, and unpatented lands on the island.

The earlier inhabitants in that vicinity were mechanics, tavern keepers, etc., who found business occupation from travelers.

In 1736 John Horn, a wheelwright, established his business on the west side of Broadway, between Twenty-first and Twenty-sixth

streets, on an acre of land leased to him by the corporation. He accumulated considerable property in this vicinity, a large part of which remained in the family of that name for many years.

This property in 1670 was originally patented to Solomon Peters, a free negro.

South of the cross road referred to was a swampy piece of land, containing about eleven acres, which belonged to the city corporation, and by them was presented to Sir Peter Warren in 1745, as a free gift. It was subsequently purchased by Henry Gage, who, after the Revolution (having returned to England), sold to Isaac Varian £600. Mr. Varian also owned a considerable tract situated on the west side of Broadway, between Twenty-sixth and Thirty-first streets, containing about fifteen acres, which he bought from the family of John De Witt, in 1787, at the price of £1,280.

Mr. Varian also pursued the avocation of a farmer, and resided in his old homestead until his death. A view of the building, as given in this publication, presents the most suggestive idea which can be produced of the condition of Broadway in early times.

On the east side of Broadway, from Fourteenth Street to Ninth Street, and covering some eight or ten blocks, including part of Union Square, was the estate of Tiebout Williams, next adjoining which was the Krom-Messie property, running back to near the Second Avenue, in about the centre of which Grammercy is now situated. Adjoining this estate and extending around the Post Road was the property of John Watts, a leading citizen of New York.

The streets from Twenty-first to Twenty-sixth streets, and also Madison and Fourth avenues, cross this property.

At the junction of the Old Post Road and Bloomingdale Road (now Madison Square Park) was a piece of land belonging to the corporation, which was for many years used as a Potters' Field.

In 1806, at which period measures for the defense of the city

of that day, and my concern is to reveal New York as it actually was near eighty years ago, not to maintain "the dignity of history." This explanation is to be applied to all cases wheresoever I deal with matters of small import in the course of this volume.

Before the introduction of shop butchers, when a butcher in any of the public markets became possessed of an exceptionally fine beef or a number of sheep, he would

WALTON HOUSE, FRANKLIN SQUARE, NEAR PECK SLIP, 1776

106

parade them through the principal streets, as Broadway, Bowery, Greenwich, and Grand streets, preceded by a band of music and followed by the fellow-butchers of his market, with their aprons and sleeves on, in their wagons (of a different construction from that of a later time), the *cortège* being arrested before the house of the customers of the butcher, when it was expected of the occupants to step out and give an order for such part of the animal paraded as they elected.

A large building on the East side of Broadway, between Seventeenth and Eighteenth streets, was known as the

Quotes drawn from this page: 5 6

nearly half a dozen more are ready to be opened in a very few weeks." In five years, 1850 to 1854, nineteen hotels, all of them luxurious, opened on Broadway alone.

The finest hotels dating from this building boom were the American Hotel at Broadway and Grand Street; the Union Place at 860 Broadway, at Fourteenth Street; the Carlton at 350 Broadway; the Union at 496 Broadway; the Collamore at Broadway and Spring Street; the Aeolian at 834 Broadway; the Metropolitan at Broadway and Spring Street; the City at 492 Broadway; the St. Nicholas at Broadway and Spring Street; the Prescott House at Broadway and Spring Street; the Albion at 769 Broadway; the St. Denis at Broadway and Eleventh Street; the Howard at 434 Broadway; the Carroll at 722 Broadway; the Astor Place at 733 Broadway; and the Lafarge House, on Broadway opposite the start of Bond Street, which burned just before its completion in 1854 and finally opened two years later.

The expected crush of visitors to New York's Crystal Palace exhibition of 1853 spurred the building boom. These hotels also provided living quarters for the rising numbers of visitors coming to New York for business or pleasure from across America or from Europe. New York, according to the *Herald*, was becoming for America "what Paris is to France, and London to Great Britain . . . in trade and commerce, science, literature, and the arts."

During this period, the *Herald* asserted that each hotel owner "vied with the other to rear the most gorgeous structure." But it was the St. Nicholas, which opened on January 6, 1853, that excelled all its rivals. Its extravagance, services, and public acclaim have been occasionally equaled but never surpassed by New York hotels built in later years. "Comfort, convenience, magnitude, and luxury seem to have attained their climax . . . in the vast and magnificent St. Nicholas," the *Home Journal* glowingly reported. "It is now, beyond all controversy, the largest hotel in existence," and its Italianate building is "one of the principal ornaments of our city and a credit to American architecture." The public parlors and dining rooms were so grand that *Putnam's Monthly* thought "luxury could no farther go, that there was no beyond, in the progress of refinement." Indeed, the "resources of the up-

HISTORY OF "BOTH SIDES OF BROADWAY."

79

In 1840 Palmo abandoned the cafe and built an opera house in Chambers Street. Afterwards it was known as Burton's Theatre.

556. In 1846 Grace Church, on Broadway, opposite Eleventh Street, was erected. Rev. Thomas H. Taylor was its first pastor.

In 1851 Eolian Hotel occupied No. 834 Broadway.

In 1850 Union Place Hotel occupied No. 860 Broadway.

In 1852 Albion Hotel occupied No. 769 Broadway.

557 In 1852 St. Denis, corner Broadway and Eleventh Street.

In 1852 Liberty Street was widened from Broadway to Greenwich Street.

In 1851 Dey Street was widened from Broadway to Greenwich.

In 1854 Wall Street was widened from Broadway to Nassau.

In 1850 the popular public houses on Broadway near Dey Street were Rathbone Hotel, 163 Broadway; Franklin House, corner Broadway and Dey Street.

In 1850 the west side of Broadway was the fashionable side for retail trade.

The Tremont Temperance House formerly occupied No. 110 Broadway.

The congestion of traffic on Broadway had been a source of trouble for over fifty years. In 1852 a resolution was submitted to the Board of Aldermen that aerial bridges be placed on the important streets intersecting Broadway, to enable pedestrians to cross in safety from one side of Broadway to the other.

No definite action was taken in the matter until June 23, 1866, when the Board of Aldermen and commonality, with the approval of the mayor, passed a resolution to receive bids for the construction of an aerial bridge across Broadway at Fulton Street, the expense thereof not to exceed \$15,000.

This bridge was eventually finished, at a cost of \$24,000, and opened for traffic May 16, 1867.

Knox, the latter, then at the corner of Broadway and Fulton Street, experienced considerable annoyance by the erection of this bridge.

It took away a great deal of his light and air, and made the approach to the store anything but pleasant. The bridge was the rendezvous of disreputable characters, and it became so obnoxious that through court proceedings, instituted by Knox, the bridge was removed, at a cost of \$9,900. It was closed to the public Saturday, December 24th, 1868. The picture of the bridge in this publication was taken on Thanksgiving Day, 1868. The people photographed thereon were employees of Knox, and the policeman is Officer Lester Lewis.

Officer Lewis, up to a few years ago, was a special officer at the Empire Building, No. 71 Broadway.

134 135

In 1869 a tunnel was built by Alfred E. Beach on Broadway, running from Warren Street to Park Place, with an easterly section running under Broadway to the fountain in City Hall Park.

Oakey Hall, the mayor of New York, attempted to stop the work. The case was thrown out of court, the judge holding that the company had not exceeded their charter.

The tunnel was completed on February 26, 1870, and the first trip was made. An underground reception was given, to which all the State and city officials, well-known engineers and members of the press, were invited.

The tunnel was used until 1883, when it was abandoned.

It was originally built for the purpose of demonstrating the utility of same for the traveling public, and for transmitting of letters, merchandise, etc., by the pneumatic system.

In 1889 an *Evening World* reporter, accompanied by an artist of the *World* staff visited this underground cavern. On entering the tunnel, to their surprise, the air was cool and fresh. They reported the tunnel to be round, eight feet in height, built of iron, brick and

Lockwood, *Manhattan Moves Uptown*, 1976, p. 290

Quotes drawn from this page: 9

oughfare, with a semblance of departed greatness, and an acknowledgement of surrendered splendor. The high stoops before which private carriages stopped, and emptied loads of feminine fragrance, the broad halls and airy drawing-rooms that were trodden by dainty feet, and filled with soft voices and voluptuous music are profaned today by more common uses."

By the 1880s Bleeker Street and the streets south of Washington Square had become one of the most shabby and unsavory areas in the city. Sullivan, Thompson, and Macdougall streets were an overcrowded black slum known as "Coontown." St. Benedict the Moor, the first black Roman Catholic church in the northern states when it opened in 1883, stood at 210 Bleeker Street, at the corner of Downing Street. French immigrants filled the houses on Wooster, Greene, West Third, and West Fourth streets, an area called "Frenchtown." Bars and concert halls were scattered through the neighborhood. The Black and Tan Concert Hall, also known as the "Chemise and Drawers," on Bleeker Street featured meagerly clad black dancing girls, who were available as prostitutes. (Scotch Ann's" was a brothel where the whores were young men with painted faces, effeminate voices, and women's names.

845

Rich families had begun to leave the handsome red brick houses on Bleeker Street around 1850, so its decline after the Civil War was no surprise to New Yorkers. But what shocked and upset the gentility in the 1860s was the influx of shops into Union Square. They took over the basements and parlor floors of mansions and row houses, some of which were less than ten years old, and none of them more than twenty years old. So families left their homes on Union Square for Murray Hill, an enclave supposed to be forever safe from the intrusion of trade. By 1865 the *Times* reported that nearly all the houses on Union Square had become boardinghouses.

Union Square had never been an exclusively residential location, like Fifth Avenue or Gramercy Park. In 1851 the *Daily Tribune* described Union Square as the favored location in the city for sumptuous family hotels. The Union Place Hotel, completed in 1850, stood at 860 Broadway, at the southeast corner of Fourteenth Street. The Clarendon Hotel

- 1850 the Franklin House, at the north-west cor. of Broadway and Dey St., enjoyed popularity.—*Man. Com. Coun.* (1865), 544. The Franklin House is shown on A. Pl. 25-b, Vol. III.
- On Fifth Ave., between 34th and 42d Sts., where the grade was reduced, two lines of 36-inch water pipe were lowered, in this year, without breaking joints, at an expense to the city of only \$12,633.68. The work had been previously estimated to cost between \$60,000 and \$100,000.—*Man. Com. Coun.* (1854), 223.
- In this year, an iron stairway was erected at High Bridge. A plot of 100 acres, immediately north of the receiving reservoir, was selected by the "Water Department," as a location for the new receiving reservoir proposed by Mr. Van Schaick in 1848 (q. v., N 2).—*Ibid.* See, however, F 5, 1851.
- In 1850, the churches on Fifth Ave. were the Washington Square Church (Dutch Reformed), erected in 1840; the Church of the Ascension (Episcopal), 1840; the Church of St. John the Evangelist (Catholic), 1842; the First Presbyterian, 1845; the South Church, 1849.—*The Great Metropolis for 1850*, 109-17; and Je 8, 1849. For their locations, see L. M. R. K., III: 928 et seq.
- The Homeopathic Dispensary, at 448 Broadway; The American Hotel, cor. of Grand St. and the east side of Broadway; Washington Hall, at 598 Broadway; Masonic Hall, at 600 Broadway; Rope Chapel, at 716 Broadway; the Am. Musical Institute, at 303 Broadway; the Nat'l Academy of Design at 603 Broadway; the N. Y. Hotel, at 721 Broadway; the Union Place Hotel, at 300 Broadway, all date from this year.—*Man. Com. Coun.* (1865), 635-36, 652.
- 565.2 For a history of the Union Place Hotel (known as the Morton House after 1868), at the south-east corner of Broadway and 14th St., see the *N. Y. Times*, Je 12, 1921.
- At this time, the Broadway Theatre, on the east side of Broadway, between Pearl and Anthony Sts., was in prosperous operation.—*Man. Com. Coun.* (1865), 588.
- The private residences of Thomas Cooper and Stephen Price, at 350 and 352 Broadway, n. e. corner of Leonard St., at this time had been converted into a hotel called the Carlton House.—*Man. Com. Coun.* (1865), 596.
- In this year, the American Art Union was in flourishing condition, with galleries at No. 497 Broadway. For an account of this enterprise, with view of the gallery, see *The Great Metropolis for 1850*, 72-73.
- 452 In this year, the Baptist Tabernacle Church was projected, the site selected being on the east side of Second Ave., between 10th and 11th Sts., opposite Stuyvesant St. For description and view of the building, see *The Great Metropolis for 1850*, 61-62.
- The history of the elevator as used in New York began in this year. "In America the first man to manufacture platform freight elevators seems to have been Henry Waterman, of New York city. As early as 1850 one of his machines was in use by Hecker, of New York [at 201-3 Cherry St.]. The Tatham had them in 1853, and at about the same time either Waterman's machines or some very like them were in use in the establishment of Harper and Brothers . . . Waterman's shop was in Duane Street, near Centre . . ."
- From "The Vertical Railway," by W. Sloane Kennedy, in *The Galaxy*, N, 1882, p. 889. See also *ICONOGRAPHY*, III: 670. An elevator was proposed by John Randel, Jr., in connection with his invention of an elevated railroad, in 1846, the design of which was published in 1848 (see Pl. 133-a, Vol. III), but this was never built. See, further, Je 30 and Jl 14, 1853.
- In this year, numerous resolutions were passed by the common council that gas lamps be placed in front of specified churches.—*Proc., App'd by Mayor*, Vol. XVIII; see also XVII, XIX, etc.
- In the early Fifties, the private school of Wm. Forrest (later Forrest & Quackenbos) was established at the north-west cor. of Sixth Ave. and 14th St. The youth of many prominent New York families of the period were pupils there. For Henry James's account of it, see descrip. of Pl. 135, III: 703.
- 790 In this year, the first three volumes of the *Documentary History of New York*, compiled by Dr. E. B. O'Callaghan, were published. The fourth, and last, volume appeared the next year.—See Ap 11, 1848.
- This is the last year covered by Thos. F. De Voe's manuscript index to the early newspapers of New York and vicinity, contained in two ledger volumes, now owned by the N. Y. Hist. Soc. The entries mention briefly the notable daily events which he collected by a careful page-by-page analysis of the world's news which had been published in *The Flying Post* in England in 1696, the *Boston News Letter* (1704 et seq.), the *Am. Mercury* (Phila., 1721 et seq.), 1850 the *Boston Gaz.* (1724 et seq.), the *N. Y. Gaz.* (1727 et seq.), and many other papers of later date in New York collections.
- His index covers a great variety of subjects, and the present Chronology is much indebted to De Voe's painstaking researches and reading, which continued for 40 years, for the guide to many of the items in contemporary newspapers cited in this work. While it was practically impossible for one man to include, in such a page-by-page review, all the newspapers published in New York after 1800, or to index all the events and new advertisements of important news value in those examined, these two ledger volumes, nevertheless, are a most useful and valuable contribution to the history of New York.
- From 1850 to 1860 there is a decade untouched by this or any other similar work. After that, the *Times Index* offers a somewhat similar guide to the news published in that one New York newspaper. The *Tribune* in 1875 supplemented this by an index to the news published in its pages, but this was discontinued in 1906. The *Times Index* is continuous from 1860 to date, with the exception of 1861, 1862, and a hiatus from 1905 to 1912 inclusive.
- The N. Y. Hist. Soc. also possesses much data collected by De Voe relating to the military history of New York, he himself having been colonel of the "Washington Greys" (later the 8th Regt.); also a large scrap-book of New York views, illustrated advertisements, portraits, etc. from contemporary magazines, Valentine's Manuals, etc., which he gathered from about 1840 to about 1890. De Voe published three books: *The Market Book* (N. Y., 1862), a history of the old markets of New York, frequently cited in the Chronology; *The Market Assistant* (N. Y., 1867), giving an account of practically every article of human food sold in this country; and *Genealogy of the De Voeux Family* (1885). He died Feb. 1, 1892.
- A summary survey of events in New York from 1850 to 1875, entitled "N. Y. City in the 19th Century," was published in *Am. Hist. Mag.*, Vol. I (1906), 407-26.
- In this year, the *International Magazine* was first issued, under the editorial control of R. W. Griswold.—S. N. D. North, *The Newspaper and Periodical Press* (1884), 117.
- In this year was published (in Phila. and N. Y.) a square 12mo entitled *City Cries; or, A Peep at Scenes in Town, By an Observer*, containing 24 illustrations of town criers.
- "A ferry has been established between Manhattanville and Bull's Ferry, a lease for the same having been granted for five years, by the Board of Aldermen. This will be a public convenience, both for the purposes of travel and the transportation to this city, of cattle from the West."—*Eve. Post*, Ja 4, 1850.
- "Among the most important of the various serial works now in course of publication by Messrs. Tallis, of this city and London, is their 'Illustrated Atlas.' These beautiful maps are engraved in the best manner from the latest authorities, and are in a convenient and portable form.—Thirty-two numbers, at 25 cents each, containing two maps, will complete the atlas. Each map is ornamented with vignette views of interesting localities; and taken as a whole, this work may be regarded as the most attractive Atlas yet presented to the public."—*Eve. Post*, Ja 5, 1850.
- The common council creates a "Bureau of the City Hall and Park." The term "City Hall," as here used, includes all the public buildings in the Park. The officer in charge shall be called the keeper. His duties are prescribed. He and his family may occupy such rooms in the city hall as may be assigned to him by the comptroller.—*Proc., App'd by Mayor*, XVII: 580.
- The common council resolves to present the freedom of the city, in a gold box, to Capt. David Cook, commander of the bark "Sarah," of Yarmouth, Nova Scotia, who, in a gale of wind and rough seas, went to the rescue of the passengers of the ship "Caleb Grimshaw," of New York, which caught fire when near the Azores, in Nov., 1849, and who, after eight days' perseverance and hard labour succeeded in saving nearly 400 persons.—N. Y. H. S. Coll. (1885), 426-27; *Proc., App'd by Mayor*, XVII: 588-89. The freedom was presented on Jan. 24.—*Eve. Post*, Ja 25, 1850.
- The common council passes a resolution expressing appreciation of "the noble and disinterested efforts of M. Vattemare, in the cause of science, literature and humanity," with thanks for "his valuable donation of books and works of art," which expression of appreciation it is desired he will convey "to the several bureaux of the Republic, the various municipal governments and private individuals, on whose behalf he has presented us with these noble

made in its ranks, the remaining scions of the old *regime* that held the social reins three-quarters of a century ago, still hug the prejudice that makes an out-at-elbow Schuyler or Livingston of more social consequence, than Smith or Jones in diamonds, with an income of a hundred thousand a year.

At the southeast corner of the square stands the equestrian statue of Washington, another atrocious outrage on horseback upon the memory of the "Father of his country," and one over which all New Yorkers who have any taste for art have shed tears without number. To call such an embodiment of the heart's yearning for the perpetuation in bronze of the heroic and the palpable, would be to libel the beautiful and the grand in marble or on canvas. The Sphinx illustrates and immortalizes the Pyramids, but this statue of Washington illustrates nothing, save a futile but perpetual effort of the once great warrior and statesman, to urge his Bucephalus into a gallop.

Let us move on round the square, taking in the elegant marble building, corner of Fourteenth street and Fourth Avenue, the Clarendon, a⁰ thoroughly English hotel, with English servants, English cooking, and English manners, and as comfortable a place to stop for a month as there is in the city. The Everett occupies the opposite corner of the square, and now we are back into Broadway again at the corner of Seventeenth street. From this point to Thirty-fourth street, can be seen a succession of stores and hotels that tell at once the story of our grandeur and our folly, and which, when the reaction against fast living that many sensible people are looking for, comes, will loom up as monuments of faded splendor. How strange it would seem, if even here in the metropolis, we should some

widely considered a place of constant light, a playground of night-birds, an all-night bazaar where there was little difference between night and day.

"When all the rest of the city is asleep, Broadway is awake," William Henry Rideing wrote in *Harper's* in 1877, describing the street as a "vista between . . . two bead-like strings of lamps" where figures appeared at ungodly hours, "plodding along on various missions of crime, industry, pleasure, or charity."

ELECTRICITY CAME to Broadway in 1880, when the Brush Electric Light Company opened offices at 860 Broadway, one block north of Union Square. Charles Francis Brush, thirty-one, who wore the era's requisite handlebar mustache and an optimistic, steadfast expression, was an engineer and inventor of enormous intelligence, with a Barnum-like flare for theatrical self-promotion. Among Brush's patents were a more efficient electrical generator and an improved electric-arc lamp.

The "arc" in question was a current of electricity that jumped between two vertical burning pencil-shaped carbon rods, producing light that was intensely white in color. To this mechanism Brush added an ingenious device: As the lower carbon rod burned, the upper one moved slowly downward, maintaining the necessary spacing. Arc lamps flickered and were extremely hot, which limited their use in private homes. But they worked well in larger buildings and outdoors, and Brush used them successfully in theaters, stores, and factories, plus along Montreal's waterfront and in Monument Park in his native Cleveland. In Wabash, Indiana, Brush mounted four gigantic arc lamps on the courthouse roof and lit up the entire town, "backyards and all."

At the same moment, Thomas Edison was busy in Menlo Park, New Jersey, testing his own system for wiring cities with incandescent lamps. The competition between Brush and Edison, and between

Brush and the United States Illuminating Company, which had developed its own version of the arc lamp, was as intense as the electric light they were producing. And in the fall of 1880, it seemed that Brush had the upper hand.

building has a delicate commercial façade of cast-iron and glass.

NANCY S. EDWARDS HOUSE, No. 859

1841; remodeled 1869 and 1897. [3 stories] The upper story and bracketed cornice of this brick dwelling are intact.

MOSES L. JACKSON HOUSE, No. 861

1841-42; remodeled 1889. [4 stories] The upper two stories and bracketed cornice are intact.

JOHN FERRIS HOUSE, No. 863

(Also known as Huyler's Candy Store). 1841-42; remodeled 1885, by C.B.J. Snyder. [4 stories] Three upper stories of this old brick dwelling are pretty much intact, as is the cornice.

E.W. CLAWSON HOUSE, No. 865

1843; rebuilt 1869. [5 stories] This façade has round, segmental, and flat arches.

DITSON BUILDING, No. 867-71

(Also known as the Whiting Silver Manufacturing Company). 1882-83, by George W. Pope. [5 stories] This fairly simple and solid façade is enlivened by modest touches like gables and brick brackets.

PARISH BUILDING, No. 860

(Also known as the Butler Building, Lienau Building, Thonet Brothers Depot, Andy Warhol's Factory). 1883-84, by Detlef Lienau; remodeled 1925, by F.H. Dewey & Company. [6 stories] The vigorous original building was considerably watered down to its current yellow-brick version. *Site of* Henry Parish house (also known as the Union League Club).

From 17th to 18th Street, east side, 1937.

ROW HOUSE, No. 862

1847-48; remodeled 1921, by John B. Snook & Sons. [4 stories] It is astonishing that these brick row houses have survived in any form. Old window

Jacob Cram House, 1988.

can still be found between Seventeenth and Eighteenth streets and between Twenty-first and Twenty-second streets. Although it is remarkable that any of them survived, perhaps the single most interesting house is 922 Broadway, the remnant of a row built in about 1854 for Jacob Cram. This was converted to a "large and pleasant hotel" called the Bancroft House, which was "furnished with accommodations that cannot fail of giving satisfaction to the most fastidious."⁸

Although the Fifth Avenue Hotel proved in 1860 that society would venture as far as Twenty-third Street, Broadway between Union and Madison squares did not pick up momentum until after the Civil War. Its first major commercial development—the Mortimer Building of 1862, an exquisite Italianate structure at Twenty-second Street that was designed by Griffith Thomas—was occupied for seven years by Bryant, Stratton & Packard's Business College, which taught bookkeeping, law, arithmetic, and penmanship.⁹

View to the north from Union Square Park showing the Parish Building (Detlef Lienau, 1883–84) in the center, the Century Company Building (William Schickel, 1880–81) on the right, and part of Everett House (1854) on the far right. MCNY.

uptown shopping district, and for three or four years the stretch of Broadway between Union and Madison Squares remained an odd jumble of imposing retail buildings towering over the remaining houses of the gentry, including one belonging to the Goelets, on the northeast corner of Nineteenth Street.¹⁶⁶ Deemed a palace when completed in 1850, with its own garden stocked with animals including peacocks, by the 1870s the house looked almost puny, and certainly incongruous. By 1878, the *New York Daily Graphic* could state, “No better evidence of the tendency of trade to seek the central part of the metropolis is wanting than the marvelous transformations that are being made year by year in the appearance of many of the aristocratic thoroughfares between Union Square and Thirtieth Street, on the west side . . . [where] palatial business structures loom up over the spot where once stood the elegant mansions of the rich, and almost weekly old and familiar landmarks disappear only to give place to the ever increasing demands of business.”¹⁶⁷

When business picked up in the 1880s, the Parish family’s namesake building (1883–84), at 860 Broadway, on the northeast corner of Seventeenth Street, was one of the more interesting new designs, a late work of Detlef Lienau.¹⁶⁸ The Parish Building was developed by descendants of Henry Parish, the dry-goods merchant, whose Italianate brownstone mansion (R. G. Hatfield, 1847–48) previously occupied the site and was home to the Union

Parish Building, 860 Broadway. Detlef Lienau, 1883–84. Perspective view to the northeast. Lienau Collection. CU.

Boyer, *Manhattan Manners*, 1985, p. 122

Quotes drawn from this page: 25

The debate between monumentality and organizational unity continued to confront the New York tall building throughout the rest of the nineteenth century. If monumentality was desired and verticality stressed, the significance of the building's parts was necessarily reduced and the exterior facade became monotonous and dull. On the other hand, if organizational unity was desired, achieved through an attractive subdivision of the parts and an enlivened ornamentation, the effect of grandeur was always jeopardized. Had the elevator remained the only technical innovation affecting tall buildings in the nineteenth century, their height would have remained at a practical limit of ten stories or less and the debate might have continued back and forth over the correct compositional treatment. But with the invention of the steel frame, or skeleton construction, the era of true "sky-building" arrived. Before this, masonry buildings of ten stories required extremely thick walls at their base, necessitating costly excavations and consuming valuable rental area on the first floor. By introducing a skeleton frame of iron or steel, the load of the walls and floors could be carried down to the ground foundations. Although New York building laws still required in the 1880s that nonbearing walls be nearly as thick as bearing ones, the time was approaching when a relatively thin masonry facade would be "hung" from a skeleton frame reaching twenty or more stories into the sky.¹⁹⁶ Design, simply, practically, and efficiently would allow undecorated office buildings to express themselves through their mass: the less ornament, the less their fronts were broken up; conversely, the more magnificent they became, the more stunning their individual effect. Gone were the days of the commercial palace, the ornamental porticoes, the enriched roof systems, and the elaborate base structure. In their place stood a featureless skyscraper.¹⁹⁷

The early skyscrapers, Montgomery Schuyler noted, were based on faith in the dollar and were replaced again and again by even taller structures to ensure their commercial success. "Commodity in the crowded centers of great cities, is as strictly subverted by those towering structures as community is defied."¹⁹⁸ Skyscrapers to Schuyler were "un-neighborly objects": there seemed no way for them to be designed as an ensemble yielding a common impression. The architectural excellence of the new urban skyline had to be sought in its parts, not in the unattainable whole.

Driven by high land prices on Wall Street and the difficulty of finding sites large enough for these tall structures, the skyscraper began to push farther north into the retailing district of Ladies Mile, extending the New York panorama as "a chain of peaks rising above the horizon, itself a five or six story horizon, and struggling or shooting towards the sky. For another mile, for two miles more, the peaks continued to emerge, but they no longer form a chain."¹⁹⁹ For a brief moment, Ladies Mile would be the northern frontier of this staccato skyline (fig. 143).

Although Madison Square and the east side of Union Square in the early 1880s were still unadorned by tall office and manufacturing buildings, the stretch of Ladies Mile along Broadway had changed (figs 144, 145). The *Real Estate Record* drew attention to the northeast corner of Seventeenth Street and Broadway (860 Broadway) where a building stood of such poor architectural composition that it gave the appearance of two buildings, one set on top of the other (see fig. 145). As the building was conspicuously located, the *Real Estate Record* found its commonplace design by Detlef Lienau regrettable. On the other hand,

Quotes drawn from this page: 26

Fig. 44. Northeast corner of Broadway and Seventeenth Street, 1985. Many commercial successors to the Parish Mansion, including the new Union Place Hotel, would continue to take over this corner until 1893 when lots were merged and the extant six-story commercial structure designed by Detlef Lienau was erected.

Fig. 45. Number 32 Union Square Place, ca. 1903. One of the bow-fronted houses erected by Samuel B. Ruggles in the 1830s, number 32 was the last private residence to remain on the square, and was demolished only in 1904 after the death of its first owner, Richard Tighe, in 1896. Talbot Hamlin, in *Greek Revival Architecture in America*, proclaimed that these houses resembled, in scale, basic form, and detail, Alexander Parris's Boston town houses more than they did the typical New York houses of the 1830s. (Courtesy of the Museum of the City of New York, New York City)

Fig. 46. Union Square, south side, 1849. An elegant row of eight bow-fronted houses east of Union Square between Fifteenth and Sixteenth streets was erected by Samuel B. Ruggles in the late 1830s. On the southeast corner of Fifteenth Street stood Madame Chegary's School for Girls, which would become a second-class hotel in the mid-1860s. South of the square, between Fourth Avenue and Broadway, a small merchant's house and a livery stable stood next to the taller Union Place Hotel. Courtlandt Palmer was an active developer of the row of town houses between Broadway and Union Place on Fourteenth Street. The southwest corner house was built for Cornelius V. Roosevelt and one of the row houses to its right was the James Penniman House. (Courtesy of the Museum of the City of New York, New York City)

Quotes drawn from this page: 42

Theodore Roosevelt

Theodore Roosevelt, the twenty-sixth President of the United States, was born on October 27, 1858 on the site where this Greek revival house—a replica of the Roosevelt family's original—now stands. He lived here until 1872, when his family took him to Europe to live.

The young Roosevelt had a passionate interest in natural history and gained an impressive knowledge of the flora and fauna around him. His collection of small creatures could be found all over the mansion; houseguests at 28 East 20th Street learned to sit on sofas with caution and to check their water pitchers for snakes before pouring. The Roosevelt house, which over the years had been altered beyond all recognition, was demolished in 1916 and rebuilt to its original specifications in 1923. It's now a public museum, full of period furniture and Roosevelt memorabilia.

Artist **Andy Warhol** moved to the fifth floor of this twelve-story building in 1968. The white-walled loft space was called **The Factory** and housed studios, his office, and a screening room for his films. On June 3, 1968, **Valerie Solanas**, an occasional Factory visitor and sole member of **SCUM** (Society for Cutting Up Men), came to Warhol's office here, pulled a revolver and shot point blank at him, hitting the artist in the chest. Warhol was pronounced dead at the hospital but, miraculously, managed to survive. The crazed Solanas surrendered to the police a few hours after the shooting. She served a three-year sentence and died in 1988. Warhol lived until 1987.

2/Andy Warhol

860 Broadway at 17th Street (north-east corner).

By 1974, **Warhol** had run out of space at his Union Square studio called **The Factory** (see number 1 above) and, in August of that year, he moved across the street to this six-story brick building. The space was located on the third floor and included over 12,000 square feet of offices, storage space, and studios. Always economical, Warhol made it a condition that all visitors to The Factory during the move had to carry at least one item across the street to the new building. Warhol's studio remained here until 1982, when he began to

Balducci's

573

1970s, 1980s

424 Sixth Avenue (9th St./10th St.)

In the mid-seventies, Factory lunches were procured from the gourmet Italian grocery store Balducci's, and usually picked up by Brigid Berlin, who became a Factory regular in the early sixties and a full-time Factory employee shortly after Warhol moved to 860 Broadway. A typical order would consist of curried chicken salad, string bean salad, pasta salad, sliced tomatoes and broccoli in oil, and several loaves of bread. 846.2

Having struggled with her weight for many years, Berlin was known to take amphetamines regularly; they had been prescribed for her, at the insistence of her parents, at an early age. But weight continued to be an issue for her. When she returned from a Balducci's

lunch run, loaded down with numerous bundles, Warhol might accuse her of forgetting something and tease her about the whereabouts of the dessert, in a relationship she described as like "Edith and Archie Bunker." (Berlin quit taking amphetamines in 1974.)

Warhol and Berlin would typically call each other nightly and each tape-record the conversation, as Warhol did routinely with the art critic David Bourdon. Berlin recorded just about all her phone conversations with everyone. Tapes she made including information about her mother, Honey Berlin, wife of Hearst corpora-

who was not thrilled at the thought of Warhol as a tenant, after a while the space was theirs.

Hardwired for thrift, Warhol insisted that his staff carry some of their boxes across the square by hand. "It'll be one less thing for the movers to move," he would say. "They charge by the hour you know." And all this schlepping was going on in the August heat at almost exactly the same time that Warhol and Jed were moving in on East Sixty-Sixth. Even Warhol's high tolerance for chaos and multitasking must have been challenged by the amount of change going on in his life.

The new offices (that plural had now become fitting) occupied the entire third floor of the building at 860 Broadway. Decades earlier, it had been home to S&H Green Stamps, whose products had been the subject of some of Warhol's earliest Pop Art. Their vintage offices came with a grand, wood-paneled boardroom, shipped over from England and perfectly suited to Warhol's newly conservative image. When Fremont and Hughes first saw the space, the boardroom was surrounded by yawning empty spaces interrupted only by slender cast-iron columns; they must once have been filled with typists and clerks.

Any money the move saved on rent must have been more than offset by the \$25,000 cost of a substantial renovation, needed to make the new rental suit the multiple needs of Warhol's multiple enterprises, not to mention the peculiar needs of the man at their head. The bulletproof door was ferried across Union Square and bolted into the new entranceway, to be joined by a new surveillance camera. (Although the way it was installed meant that the only thing it was likely to reveal about a potential intruder was a bald spot.)

These security measures were soon augmented by an impressive array of electronics that made the place seem as well secured as Fort Knox. In fact, they were components in a radio installation that Warhol had acquired from the young high-tech artist Keith Sonnier. "Andy's big fascination," Sonnier recalled, "was with how it looked like a surveillance camera in the foyer of a factory." Actually, the work's equipment only processed radio signals coming in from outside and did not include a single lens.

The landlord refused to pay for the armed guard in the lobby that Warhol had hoped for, so the artist sometimes took it upon himself to play watchman. If for some reason Vincent Fremont wasn't there to lock up at night,

Warhol would do the rounds of the workplace, checking all the ashtrays and even pulling out the plugs of the photocopiers “so they won’t start a spontaneous combustion.” (Reluctantly, he’d leave the fridge plugged in.) On the nights that other people *were* there to close up shop, Warhol would simply remind them, endlessly, to do the same checking and rechecking. His staff

Quotes drawn from this page: 47

about how things had changed over the course of almost exactly thirty years. To find success in the world of fine art, after a decade of trying, Warhol had to leave behind his Shahn-isms and find a whole new kind of work to make, without the gay content he had once counted on. Basquiat got recognized almost at once, in an art world that was less allergic to "alterity" than it had been in the Eisenhower era. ("The Other" as a concept was coming into fashion at the same time as Basquiat was.) That same art world was also more desperate than ever to find new stock for its ballooning market, even if that meant turning to such marginalized figures as a black kid from Brooklyn, *on the street* even if he might not really be *of the street*.

Or it could be that such a kid was less able to resist the blandishments of the art establishment than some overeducated, hard-nosed conceptualist might be, and less likely to push back against them. For a new breed of young and unschooled collector—or a breed schooled only in art's old, romantic clichés—Jean-Michel Basquiat, fresh from the park bench, was a much less scary proposition than Chris Burden, fresh from the college lecture hall. Basquiat was certainly sexier, and also easier to sell.

The first time that Warhol and Basquiat met, after their early encounters on the street, was for a lunch date at 860 Broadway arranged by Warhol's ambitious Swiss dealer Bruno Bischofberger. This was the same Bruno who had got the "kids" used to big money, as per Warhol's earlier diary entry, and was now busy putting Basquiat "on easy street," Warhol said. He and Bischofberger had a deal whereby Warhol would do a portrait of any of the Swiss dealer's new artists in exchange for one piece of their work. That afternoon Warhol took Polaroids of Basquiat so he could fulfill his end of the bargain with a quick silkscreen job, but the younger artist one-upped him instantly: Rather than staying for lunch, Basquiat took off with a Polaroid of him and Warhol together and, as Warhol remembered, "within two hours a painting was back, still wet, of him and me together."

Here was Warhol, a veteran slayer of painting who had recently declared its replacement by photography, being forced to deal once again with wet paint. In an interview done just the previous year he was still advertising himself as one of painting's original and most committed haters, saying that he'd only returned to paint after being shot because it was easier to work in than other media. And then, by the middle of the '80s, he was suggesting, with some bemusement, that maybe he'd been wrong to count painting out:

"I like all paintings; it's just amazing that it keeps, you know, going on. And the way new things happen and stuff."

As the newest of "new things" happening in the '80s, the young painter Basquiat was simply irresistible to Warhol. Over the course of the next sev-

Gopnik, *Warhol*, 2020, p. 849

Quotes drawn from this page: 48

come to also be counted as artistic successes, and that a check from a dealer might be a fine and fascinating ready-made.

In the 1980s, it seems as though Warhol was starting to feel more oppressed than excited by his commercial enterprise. When an interviewer mentioned that he knew a young artist who made objects, films and videos and also played in a band, Warhol replied, "If you don't get so involved in business, you can have the time. Since we have a business here, I can't do all the fun things I did at one time." A staffer once asked him why he was ordering bulletproof eyeglasses, of all things, and he gave a weird workaholic's answer: "Well, if I get hurt and keep my eyes, I can keep working." When the same person asked him to donate to some good cause or other, he explained that he felt he was working for a "cause" every day of his life: funding jobs for the "kids" in his studio. "I need to be as busy as I can, making paintings—they're my project; the kids are my project," he said.

This wasn't a project Warhol always seemed that keen on. In 1986, a reporter asked him to talk about the role he'd played as the leader of the Silver Factory crowd. "That's negative, to me it's negative. I don't want to talk about negative things," Warhol said. "Well, what about these happier days at the present Factory? Now you're a corporation president," replied the reporter. "It's the same," said Warhol.

Product, good or bad, had to be turned out. By the dawn of the '80s, Warhol had taken all kinds of steps to expand the capacity of his production line, mostly through outsourcing. While 860 Broadway played host to the planning and designing of all the new series, as well as to any background painting that was called for, the silkscreening itself—whether onto painted canvas or printmaker's paper—was outsourced to a contractor named Rupert Jasen Smith, who had replaced Alexander Heinrici in the last years of the '70s. Smith was a new-minted BFA, still in his twenties, who lived and worked in a big loft on Duane Street in Tribeca, a scruffy industrial neighborhood in those days, and dangerous. Smith slept at one end of the space, cooked in its middle and oversaw Warhol's printing at the other end, in a work space where pandemonium reigned, according to an employee of Smith's named Horst Weber von Beeren. The chaos was "like an abortion

on a kitchen table," said von Beeren, who did the actual silkscreening along with two other skilled printers. Smith himself, who von Beeren said was too short to manage the mechanical squeegee, supervised from afar. More than anything, Smith handled the contacts with Warhol.

Ventilation was pretty much nonexistent in the loft, despite noxious

"Beautiful."

Andy Warhol repeated the word three times in telling his diary about the biggest purchase he had ever contemplated. "Buying it would be like buying a beautiful piece of art, this beautiful space," he said. "It goes up five floors and there's no heat, it's just like one shell, but it's so perfectly beautiful. I could put in hot air and toilets and it would be an artist's space."

He was talking about a sprawling electrical substation built in 1929 by Consolidated Edison, New York's power company, and decommissioned in 1970. It was down the street from the Empire State Building, with one entrance on Madison Avenue and then narrow arms that stretched out to both Thirty-Second and Thirty-Third Streets, filling a strange "T" of land squeezed between other structures.

At first, Warhol had resented Fred Hughes's insistence that they needed a bigger headquarters than they had at 860 Broadway, so there'd be room for *Interview* and the video projects to continue expanding. There was clearly a risk of seeing his own art making swamped, and of being driven to new bacon-bringing labors.

But he'd given in. After ruling out another floor in the Broadway

building—rent there had just jumped by 50 percent—in late 1980 Warhol was looking at any number of options, from a big town house near his first apartment on lower Lexington to a huge old warehouse already full of artist tenants to a sweet little office building on a sliver of land on Fifth Avenue. He

Gopnik, *Warhol*, 2020, p. 877

Quotes drawn from this page: 51 52 53 54

MTV content: "Thanks to the independence given its makers, this program rippled with unusually lively personality."

Unfortunately, it never got to be a major part of Warhol's portfolio. Single episodes in 1985 and 1986 were followed by two more early in 1987—and then a fifth that was interrupted in midproduction by the death of its founder. It had to run as a memorial to him.

Warhol's last TV project came with a strange postscript: The president of MTV, who had okayed his program, ended up buying his town house on Sixty-Sixth Street.

Warhol might have closed on the ConEd building in late '81, but it took until the spring of '83 for the big renovation to be close enough to completion for anyone to move in. The staff at *Interview* arrived first, and Warhol played his old trick of making them carry the contents of their desks to their new workplace sixteen blocks north. "My back was just killing me," Paige Powell recalled. Vincent Fremont's video team and Fred Hughes followed later. By the end of June 1984, the studio at 860 Broadway was left with Warhol and Brigid Berlin as its only occupants.

Warhol's purchase of a grand new home for his enterprise had an immediate effect on his art, but not quite as you'd expect: Rather than giving him a new place to paint, it let him make better use of his old one once he was alone there. "He got to turn 860 Broadway into a big mess," Vincent Fremont recalled. "It became an artist's studio, in total." Huge canvases lay unrolled here and there, the bathroom sinks got covered in paint and you never knew what artist-kid you might find visiting. This was when Warhol and Basquiat really got busy collaborating, and competing, on their joint works, often using canvases as big as the huge spaces could hold. "Seeing all that clear empty space, it was just so beautiful. . . . Like the loft I always wanted," Warhol said.

Warhol's diaries make clear that he was envious of all the youngsters who could just get on with making art, without the corporate baggage that he had piled up. By the mid-1980s, it looks like he was beginning to tire of his budding identity as a media magnate. Business Art was losing its appeal. In the new building, especially, there was an awful lot of bacon to bring home

to a lot of open mouths, and that was feeling more like a burden than a sign of success. To get an idea of the scale of Warhol's enterprise, consider the transfer from 860 Broadway to the ConEd building, even after the *Interview* staff had already installed themselves there: A moving company estimated that it would take twenty men working to load four 40-foot trucks, over four

Thirty-first Street, Stephen B. Jacobs's Library (1999), northeast corner of Madison Avenue and Forty-first Street, and M. Castedo and Jeffrey Beers's Dylan (2001), 52 East Forty-first Street [see Interiors]. In 1991 the Kitano Hotel—which became the first Japanese hotel in New York when it opened in 1973 in a nineteen-story former apartment building, the Murray [1926], 66 Park Avenue, southwest corner of Thirty-eighth Street—underwent a four-year reconstruction resulting in a new spare red brick and cast-stone facade designed by Bohdan A. de Rosset and interiors by Chhada, Siembieda & Partners that included a traditional Japanese tatami guest suite and a double-height lobby finished with mahogany panels, granite floors, and travertine accents and dominated by a dramatic staircase.²⁸

A more unusual renovation project, and one that received a fair amount of attention because of its high-profile client, was the 1983 transformation of a former New York Edison Company substation (1929), 158 Madison Avenue, between Thirty-second and Thirty-third Streets, into "the Factory," new headquarters for the varied activities of artist-entrepreneur Andy Warhol, including studio space and offices and production facilities for his magazine, *Interview*.²⁹ It was the fourth Factory location for Warhol, who had previously occupied smaller space at 231 East Forty-seventh Street, 33 Union Square West, and 860 Broadway, but the first to be given a full architectural treatment. The through-block, T-shaped, twenty-five-foot-wide, five-story building, which Consolidated Edison abandoned as a power facility in 1970, also had entrances on Thirty-second and Thirty-third Streets. As designed by Proposition: Architecture, a firm led by Anthony Caine, much of the work was devoted to restoration, including cleaning the three brick exterior fronts and restoring the putty-colored tiles that covered the walls. Huge basement-level pits formerly housing the electrical transformers were filled in and, in order to increase office space, a 2,000-square-

foot mezzanine was added to the Thirty-second Street wing. The offices were furnished with wood and glass partitions salvaged from the Federal Archive Building in the West Village, which would later be converted into residential space. Pilar Viladas, writing about the Factory in *Progressive Architecture*, was impressed with Proposition: Architecture's recreation of the Thirty-third Street facade just inside the northern wing, creating a double layer of windows for the private offices beyond: "Whether seen from inside or out, the effect of the layered facades is dramatically mysterious." Noting that the "interventions in this industrial building are Classically derived," Viladas added that although "it may seem paradoxical that a project rife with historical fragments should exemplify a modern attitude toward design . . . it is that attitude, and not the actual components, that makes all the difference. Existing elements were accepted for what they were, and additions treated as 'found objects' were chosen because they worked with what was already there. The tension between the industrial and the Classical is unpredictably powerful. The spaces are at once grand and intimate, welcoming and spooky, mundane and unforgettable. This is architecture, but it's also art."³⁰

RIVER WALK

In November 1979, the Koch administration, through the city's Department of Ports and Terminals, solicited proposals for the redevelopment of a site along the East River between Sixteenth and Twenty-fourth Streets.³¹ The thirty-acre waterfront parcel, known since the nineteenth century as Stuyvesant Cove and bounded on the north by the platform containing the United Nations International School (Harrison, Abramovitz & Harris, 1973) and the four apartment towers of Waterside (Davis, Brody & Associates, 1963–74), on

collection of skeletons and bones. That, in turn, led to his opening Maxilla & Mandible (the scientific names for upper and lower jaw, respectively), which is the first and only such store in the world. How many people need complete skeletons—or even a single maxilla? More than you might think! The shop started by supplying museum-quality preparations of skulls, skeletons, bones, teeth, horns, skins, butterflies, beetles, seashells, fossils, taxidermy mounts, and anatomical charts and models to artists, sculptors, painters, interior decorators, jewelry manufacturers, propmasters, medical personnel, scientists, and educators. They also carry African art, Papua New Guinea art, bronze skeletal models, and scientific equipment.

One big difference between “uptown” and “downtown” stores is their hours. While those in midtown, the East Side, and the West Side often open at 9 or 10 in the morning, many stores in Greenwich Village, Soho, and Tribeca don’t open until 11 or even noon. The same is often true of museums as well.

D TRAIN

GIANT RATS PULL THE D TRAIN THROUGH THE TUNNELS.

AT THE MANHATTAN BRIDGE, A GIANT PIGEON TAKES OVER.

COCKROACHES MAKE THE CORNIEST CONDUCTORS

"STAND CLEAR OF THE CLOSING DOORS. YOU DON'T WANT TO LOSE A LEG OR SOME-THING. ME, I GOT LEGS TO SPARE, BUT YOU ONLY GOT TWO OF 'EM."

Fresh Art Sock Monkey Sewing Circle
548 Broadway, 3rd floor (btwn Prince and Spring)
646-262-3273
www.freshartnyc.org (SoHo: R to Prince St)
Calling all Suzy and Sissy Seamsterpants! Come birth a sock monkey at one of Fresh Art's biweekly Thursday night sewing circles. Your simian's online sale will benefit programs for New York City artists with special needs.

Solidarity Center
55 W 17th St. (btwn 5th and 6th Ave) 212-633-6646
www.iacenter.org/nycactions
(Chelsea: F/L/M/ to 14th St-6th Ave)
No radical activist's visit to the Big Apple is complete without attending a demonstration, march or protest meeting. A good place to get the low-down and help organize is the Solidarity Center. This all-volunteer space hosts immigrant rights, anti-war, anti-racist, women's and queer-rights groups, especially (but not exclusively) with a Marxist bent. The Solidarity Center provides a meeting place for local coalitions and regularly makes its space available for community and cultural events at low- or no-cost. To volunteer, call or stop by Monday-Saturday between 12pm and 8 pm. - redguard

KittyKind
Petco Union Square
860 Broadway (@ 17th St) 212-726-2652
www.kittykind.org
(Union Sq: L/N/Q/R/4/5/6 to 14th St- Union Sq)
My wife and I volunteer for KittyKind, an organization providing care for the cats who are up for adoption at Petco. We clean their cages and play with them. They call it "socializing them." I call it fun. - Josh Medsker (KittyKind is connected with that Cat Art Film Fest at the Anthology! - AH)

Church of the Holy Apostles Soup Kitchen
296 9th Ave (@ W 27th St) 212-924-0167
www.holyapostlesnyc.org/haskhome.htm
(Chelsea: C/E to 23rd St)
I usually feel comfier sticking with the secular, but there's a lot to love about a church whose rector refused to cave to a request to shut down their long-running, 5-days-a-week soup kitchen operation "for security reasons" when the 2004 Republican National Convention was convening a few blocks away. There's no proselytizing of any kind, just a hell of a lot of casserole. Whether you're scooping mashed potatoes, busing tables, or refilling sugar shakers, a morning's shift will put you in contact with hundreds of hungry New Yorkers. I'm comfortable with any God Bless You's that get bandied around. Your paper hat is yours to keep, though you can take it off for the hot staff meal everyone shares once the last guests have cleared out. Email Clyde, the guy who keeps this mighty craft on course, with the date or range of dates you're available. Give him a few days to get back to you with whether or not there's room for you on the schedule.

Bags for the People
Spacecraft
355 Bedford Ave (btwn 3rd St & 4th St) 718-599-2718
www.spacecraftbrooklyn.com
(Williamsburg: J/M/Z to Marcy Ave)
&
3rd Ward
195 Morgan Ave (btwn Meadow & Stagg) 718-715-4961
www.3rdward.com (East Williamsburg: L to Morgan Ave)
www.bagsforthepeople.org
This non-profit organization was founded by three workers at the Union Square Greenmarket who were being driven apeshit by the volume of plastic bags they saw handed out for market shoppers' organic, responsibly-farmed produce. Instead of bitching about it, they bought a heaping helping of by-the-pound thrift store clothing, cut it up, broke out the sewing machines, and restitched
